

01 INTRODUCTION

Your AI roadmap fully shipped

We design, build, and operate AI-native custom software, agents, automations, and data pipelines, working closely with your teams.

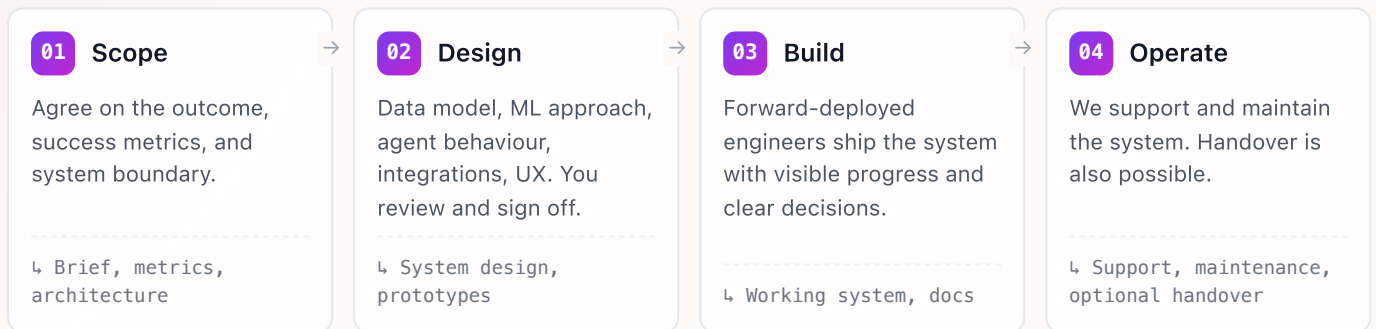

accepting projects · contact@alive.dev

With AI systems close to your operating context, we ship better, faster, at a fraction of the cost.

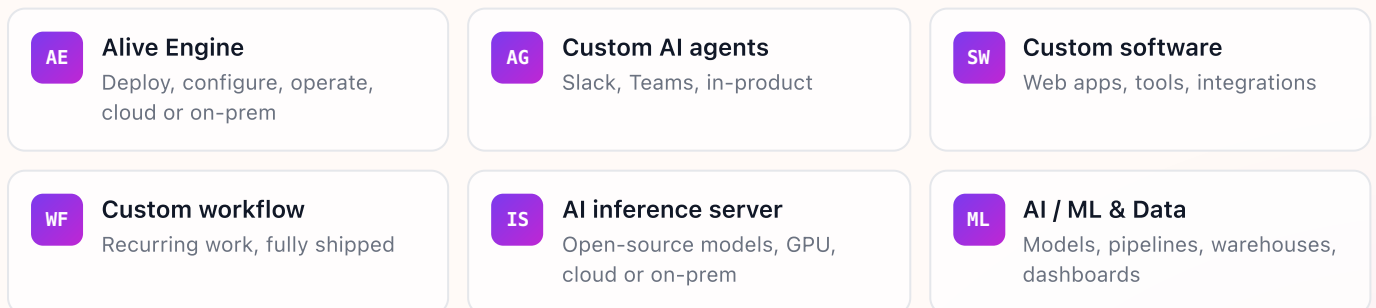

02 HOW WE ENGAGE

4 stages

03 WHAT WE BUILD

end-to-end, AI-native

Forward-deployed Embedded with your team	End-to-end We ship the whole system	Your stack Cloud, on-prem, or hybrid	Yours to keep Code, models, docs
--	---	--	--

Examples of project shapes we ship.

ID	PROJECT	WHAT WE SHIP
AG	Custom AI agents <i>Teammates wired to Slack, Teams, Alive Engine, or your product.</i> from €1k	Role design, tasks, security, data access, permissions, context engineering and memory. ↳ Production-grade agents, connected, outcome measured
WF	Custom workflow <i>Automations around a recurring outcome.</i> from €2k	Data model, integrations, validations, and notifications around the process your team runs. ↳ Workflow, validations, notifications
AE	Alive Engine POC <i>A scoped pilot for an Alive Engine deployment, cloud or on-prem.</i> from €5k	We deploy and configure an Alive Engine instance with agents and workflows scoped to a real use case, supervised in a workspace connected to your stack. ↳ Ready to use agents and workflows, supervised, intuitive UI
IS	AI inference server <i>Open-source models served to your team, cloud or on-prem.</i> from €5k	GPU provisioning, model selection, tooling, serving layer, access control, and usage monitoring for your team. ↳ Self-hosted, cost-controlled, ready to use
SW	Custom software <i>Production web apps, internal tools, and integration layers.</i> from €5k	Production-grade software your team relies on, from customer-facing apps to internal tools and integrations. ↳ Production-grade, documented
ML	AI / ML & Data <i>Models, pipelines, warehouses, and dashboards.</i> from €10k	Classical and modern ML, retrieval, ranking, forecasting, and fine-tuned LLMs. Data systems from the ground up: modelling, ELT, semantic layers, anomaly detection, and dashboards. ↳ Trained, in production, dashboards live

* AI tokens and servers are not included. Bring your own keys or we provision them. At delivery, we offer maintenance or handover.

● Working system

Production code, integrations, models, and dashboards in your stack.

● Review loop

Process for approvals, evaluation, and ongoing improvements.

● Documentation

Source, runbooks, decisions, and a next backlog ready for your team.

● Support & maintenance

Monitoring, fixes, improvements, and optional handover support.

START

Send us a brief. We'll come back with a concrete scope.
